MARIN'R

SHELTAIR

MARIN'R introduces SHELTAIR. A revolutionary, inflatable boat cover redefining maritime protection standards, with ingenious rapid air-powered setup.

Eco-friendly | Adaptable Design
Ease of Use | Durability and Reliability

 **DAME**
NOMINATED
2023

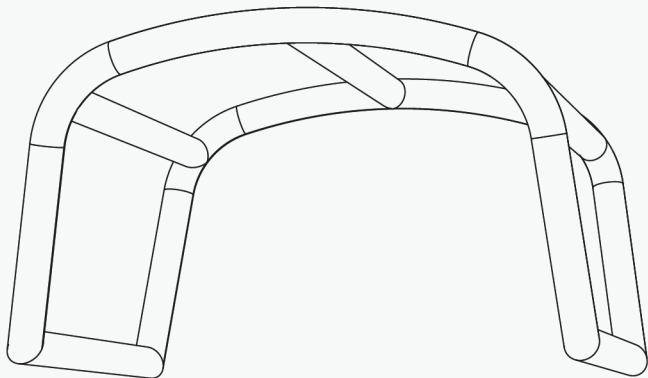

MARIN'R brings a modern solution to age-old boat covering challenges, with the introduction of SHELTAIR. This revolutionary, inflatable boat cover is set to redefine maritime protection standards with its ingenious rapid air-powered setup.

ECO-FRIENDLY

The essence of SHELTAIR lies in its inflatable frame. A unique concept that offers boat owners a stream-lined process of covering their vessels. Unlike conventional aluminium and stainless steel frames, this air-powered design significantly reduces its environmental footprint by removing the need for these metals. This is a more sustainable solution and is a testament to the commitment of MARIN'R to eco-friendly innovations.

DURABILITY AND RELIABILITY

SHELTAIR provides robust protection against wind, rain, and UV exposure, thus extending the life of the boat. In real-world conditions, SHELTAIR demonstrates resilience and durability; holding its own against strong winds of up to 60 km/h, torrential rains, and even waves. This rigorous performance, combined with its environmentally-conscious design, and user focused features is set to make SHELTAIR an added value for every boat owner.

EASE OF USE

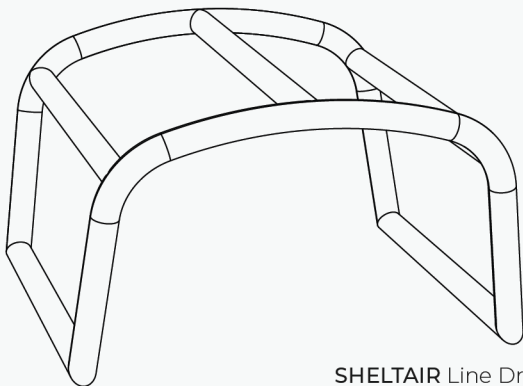

User-centricity is at the heart of SHELTAIR's design. Ease of use is the most prominent feature, making it notably different from conventional boat covers. The design ensures that boat owners spend less time fiddling with cumbersome covers, and leaving them with more time to enjoy their maritime experience.

RAPID AIR-POWERED SET-UP

This rapid inflation system is designed to minimize downtime. Boat owners can now deploy their boat cover within minutes. Users only need to simply connect SHELTAIR to a power source, and the cover inflates automatically. Deflation is equally hassle-free.

ADAPTABLE DESIGN

The use of a parametrical design tool during the production process adds another layer of precision to SHELTAIR. It ensures a custom fit for each boat model, increasing its efficacy in protecting the vessel against harsh weather conditions.
